

Indian River Password System

A Mental Password Generation Algorithm

Algorithm Overview

Input: Email address + Website

Output: River1River2@[number][checksum]

Step-by-Step Process

Step	Action	Example
1	First letter of email username → Indian River	k → Krishna
2	(3rd letter of site + 1) → Indian River	c + 1 = d → Damodar
3	Major value of River1 × Major value of River2 + 23	7 × 1 + 23 = 30
4	Checksum = sum digits until single digit	3 + 0 = 3
5	Combine: River1River2@[Step3][Step4]	KrishnaDamodar@303

Indian River Mapping (A-Z)

Letter	River	Major	Letter	River	Major
A	Alaknanda	5 (L)	N	Narmada	2
B	Bhagirathi	9	O	Orsang	4 (R)
C	Chambal	6 (CH)	P	Periyar	9
D	Damodar	1	Q	Qaveri	7
E	Erai	4 (R)	R	Ravi	4
F	Falgu	8	S	Sindhu	0
G	Godavari	7	T	Tapti	1
H	Hooghly	7 (G)	U	Ulhas	5 (L)
I	Indus	2 (N)	V	Vaigai	8
J	Jhelum	6	W	Wainganga	2 (N)
K	Krishna	7	X	Xeixei	7
L	Luni	5	Y	Yamuna	3 (M)
M	Mahananda	3	Z	Zanskar	0

Major System Reference

Number	0	1	2	3	4	5	6	7	8	9
Letters	S, Z	T, D	N	M	R	L	J, CH, SH	K, G, Q	F, V	P, B

Note: For rivers starting with vowels (A, E, I, O, U), use the Major value of the next consonant in the river name.

Worked Examples

Example 1

Input	kcpd.me@gmail.com + facebook.com
Step 1	First letter 'k' → Krishna
Step 2	3rd letter of 'facebook' = 'c', c+1 = 'd' → Damodar
Step 3	$K=7, D=1 \rightarrow 7 \times 1 + 23 = 30$
Step 4	Checksum: $3 + 0 = 3$
Output	KrishnaDamodar@303

Example 2

Input	rahul.sharma@yahoo.com + amazon.com
Step 1	First letter 'r' → Ravi
Step 2	3rd letter of 'amazon' = 'a', a+1 = 'b' → Bhagirathi
Step 3	$R=4, B=9 \rightarrow 4 \times 9 + 23 = 59$
Step 4	Checksum: $5 + 9 = 14 \rightarrow 1 + 4 = 5$
Output	RaviBhagirathi@595

Example 3 (with vowel river)

Input	test@outlook.com + netflix.com
Step 1	First letter 't' → Tapti
Step 2	3rd letter of 'netflix' = 't', t+1 = 'u' → Ulhas
Step 3	$T=1, U \rightarrow L=5 \rightarrow 1 \times 5 + 23 = 28$
Step 4	Checksum: $2 + 8 = 10 \rightarrow 1 + 0 = 1$
Output	TaptiUlhas@281

Quick Reference Card

Cut out and keep in your wallet:

FORMULA: River1 + River2 + @ + (M1×M2+23) + Checksum

River1 = 1st letter of email username

River2 = (3rd letter of site + 1)

Checksum = digit sum until single digit

Security Notes

- This system creates unique passwords for each site+email combination
- Passwords are deterministic - you can always regenerate them mentally
- Resistant to dictionary attacks and credential stuffing
- Keep this reference private - do not share your river mapping
